

58. The wet wipe of Claim 56, wherein the fabric sheet comprises fibrous material and an ion-sensitive binder.

59. The wet wipe of Claim 58, wherein the fibrous material comprises one or more layers of a woven fabric, a nonwoven fabric, a knitted fabric, or a combination thereof.

60. The wet wipe of Claim 58, wherein the fibrous material comprises one or more fibers containing cotton, linen, jute, hemp, wool, wood pulp, viscose rayon, cuprammonium rayon, cellulose acetate, polyester, polyamide, and polyacrylic.

61. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 100 g/in, a tensile strength of less than about 50 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 40% of the in-use tensile strength after being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

62. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 100 g/in, a tensile strength of less than about 30 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 20% of the in-use tensile strength after being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

63. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 200 g/in, a tensile strength of less than about 50 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 40% of the in-use tensile strength after being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

64. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 200 g/in, a tensile strength of less than about 30 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 20% of the in-use tensile strength after

being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

65. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 300 g/in, a tensile strength of less than about 50 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 40% of the in-use tensile strength after being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

66. The wet wipe of Claim 56, wherein the wet wipe has an in-use tensile strength of greater than about 300 g/in, a tensile strength of less than about 30 g/in after being soaked in water having a concentration of about 10 ppm of one or more multivalent ions for about one hour and a tensile strength of less than about 20% of the in-use tensile strength after being soaked in water having a concentration of about 200 ppm of one or more multivalent ions for about one hour.

67. The wet wipe of Claim 56, wherein the wetting composition contains less than about 3 weight percent of organic solvents.

68. The wet wipe of Claim 56, wherein the wetting composition contains less than about 1 weight percent of organic solvents.

69. The wet wipe of Claim 56, wherein the wetting composition is substantially free of organic solvents.

70. The wet wipe of Claim 56, wherein the wet wipe has an opacity greater than about 35%.

71. The wet wipe of Claim 56, wherein the wet wipe has a thickness greater than about 0.25 mm.

72. The wet wipe of Claim 56, wherein the wet wipe has a cup crush less than about 40 g.
